

MARS

Modular Abrasive Recycling System

MARS CRS-13 • High Performance Blasting, Recovery, and Recycling for the Biggest Jobs

When the contract calls for removal of lead-based coatings, the Clemco MARS CRS-13 can keep your projects on time and under budget.

The MARS CRS-13 has all the features of Clemco's larger MARS units - continual blast cleaning and recycling, reverse pulse cartridge dust collector, and multistage media cleaning. With its 1300 cfm positive displacement blower, the CRS-13 can continually process up to 10 tons of steel grit per hour. That's enough recovery power to keep pace with the two blast outlets provided. An optional built-in air drying system protects your investment in steel media by eliminating moisture contamination.

The MARS CRS-13 - built tough to handle real-world recovery and equipped to handle big jobs, yet priced to meet the needs of budget-minded contractors

Blast cleaning capabilities for two operators
